Social Media and Intelligence

By: Megan Levin

Honors Directed Study Spring 2015

Overview

- Background
- Risks
- Harm
- Assistance
- Takeaway

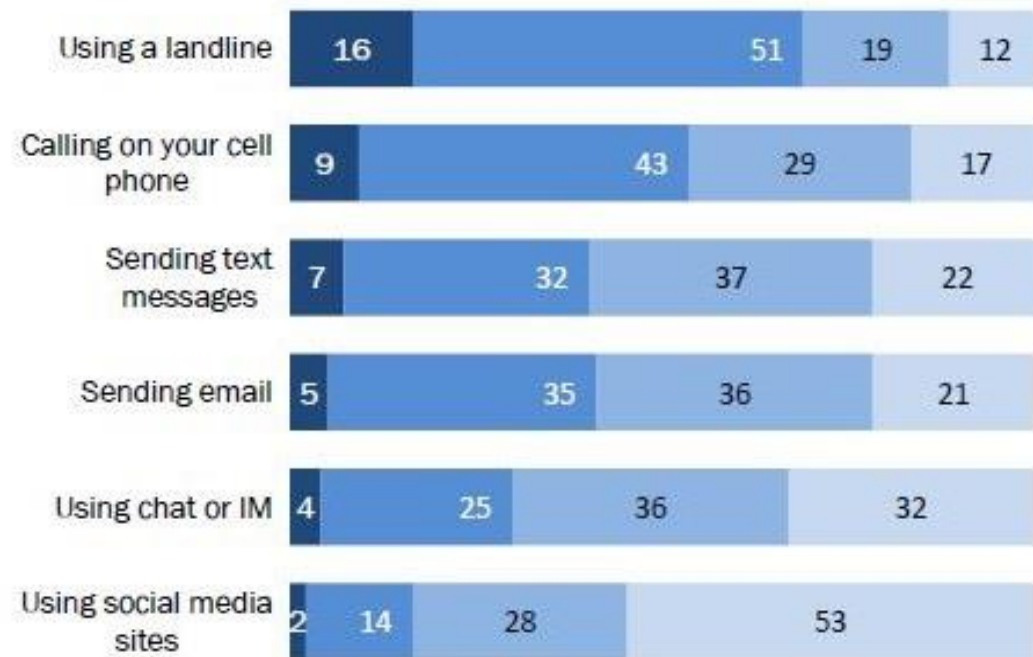

- Over 66% of adults online in America are connected to one or more social media platforms.
- There are over 750 million Facebook members. This makes it the 3rd largest nation in the world.

The public feels most secure using landline phones, least secure on social media

% of adults who feel varying degrees of security when sharing private info with another trusted person or organization

■ Very Secure ■ Somewhat secure ■ Not very secure ■ Not at all secure

Source: Pew Research Center's Internet Project, GfK Privacy Panel Survey, January 2014. N=607 adults, ages 18 and older.

PEW RESEARCH CENTER

Is privacy dead?

- “People have gotten comfortable not only sharing more information and different kinds, but more openly and with more people.”

-Mark Zuckerberg

- According to Mark Zuckerberg, the creator of Facebook, privacy is no longer a social norm.

What Information is Out There? Who Can Gain Access?

- Information a user shares may include: photos and videos, age and gender, biographical information (employment, education, hometown, etc.), status updates, contacts, interests, geographic location.
- Viewers of this information can include: advertisers, third party software developers, identity thieves, other online criminals, debt collectors, applicant reviewers, etc.

What Can This Information Result in?

- Identity Theft/Impersonation
- Harassment
- Peer Pressure
- Lost Revenue or Income
- Loss of Employment
- Damaged Business or Personal Reputation
- Intellectual Property/Data Theft
- Malware/Virus Dissemination

OPSEC: activities designed to ensure the safety of intelligence, people, and assets.

The Taliban on Twitter

- The Taliban's Twitter account has followed the feeds of several U.S. military personnel since 2011.
- One of the individuals being followed, a U.S. Air Force logistics officer, had a link on his Twitter account to a personal blog.

ISIS and Twitter as “Yellow Pages”

- On 22 September 2014, an ISIS spokesman urged followers to attack citizens of the US, France, and other anti-ISIS countries.
- Tweets called on lone offenders in the US to use social media sites like Facebook, LinkedIn, and Twitter as modern “Yellow Pages” to find the addresses of service members.
- Followers were urged to “show up [at their homes] and slaughter them.”

“Secret Trip”

- In 2009, Representative Peter Hoekstra, a member of the U.S. House Intelligence Committee, exposed his secret trip to Iraq.
- Representative Hoekstra tweeted his arrival in Baghdad, stating “Just landed in Baghdad. I believe it may be first time I've had bb [blackberry] service in Iraq. 11th trip here”.
- Not only did the trip become public knowledge, but Rep. Hoekstra continued to post his whereabouts as well as the entire party's itinerary every few hours.

GPS Geotags

- When new U.S. army attack helicopters landed at an Iraqi base in 2007, soldiers uploaded smartphone photos to social media.
- The pictures contained GPS “geotags” which automatically embed latitude and longitude within photographs.
- Insurgents were able to locate and destroy four Apache helicopters with a mortar attack.

Terrorist Use of Social Media

- Facebook group pages and discussion forums are used to share operational and tactical information.
- Social media is used to export propaganda and extremist ideological messages.
- Forum threads created by groups dedicated to Hezbollah and other terrorist networks discuss OPSEC measures to maintain anonymity and how best to use social media.

Digital Propaganda

- An experimental unit of the State Department, the Center for Strategic Counterterrorism Communications (CSCC), counters al-Qaeda and other extremist groups by producing its own digital propaganda.
- @ThinkAgain_DOS is caustic and high tempo and actively looks for places to start fights.

Abu_Yusuf_1 Abu Yusuf

@ThinkAgain_DOS our dead are in paradise and yours are in hellfire. Either way we win either way yall lose. Simple as that

ThinkAgain_DOS Think AgainTurn Away

@Abu_Yusuf_1 what kind of distorted ideology rewards murderers of children? Is this how #alqaeda defends Muslims by executing their children

SOCINT- "Social Media Intelligence"

- Minutes after Malaysia Airlines Flight 17 went down on 17 July 2014 in eastern Ukraine, killing all 298 on board, a DIA analyst sifting through social media got a "hit".

Social Media Facial Recognition

- The DIA has developed a classified facial recognition tool that scans social media. It was able to prove that Russian soldiers were moving into Crimea, Ukraine in 2014.

Takeaway

- Assume there is no privacy on social media.
- Maintain OPSEC.
- Extremists and terrorists have a significant presence on social media.
- Social media may be exploited as a tool for military and intelligence operations.
- Think of, and protect, your future career.

Questions?
